## The Stock Market

### The Chief Economist's Analysis [a focus on BANK OF AFRICA MALI]

At the end of 2019, BOA Mali's net banking income stood at CFAF 32,055 million compared to CFAF 29,726 million the previous year, an increase of 7.83% mainly driven by commissions. As for the bank's net profit, it became in deficit, going from CFAF 6,340 million on December 31, 2018 to CFAF -6,987 million in the same period in 2019. BOA Mali justifies this loss by the increase in the cost of risk due to the consolidation of its portfolio. On the stock market, BOA Mali share price went from CFAF 1,150 at the beginning of 2020 to CFAF 920 at the end of the session on April 10, 2020, ie a 20% depreciation. The overall downward trend in the stock could be explained by the losses suffered by the bank in 2019 (already anticipated when the results for the 3rd quarter of 2019 were published). The bank's desire to strengthen its equity with a capital increase of CFAF 3,280 million to bring it up to CFAF 18,730 million could be constrained by the current health crisis if this must be done through mobilization of the financial market. This situation could be unfavorable for a positive evolution of the stock over the coming months in addition to the fragile security context of Mali.
