## The Chief Economist's Analysis [a focus on SICABLE CI]

At the end of the first half of 2020, SICABLE company recorded very interesting results which consolidated the performance of the first quarter: turnover increased by 71.2%, from CFAF 6 106 million on June 30, 2019 to CFAF 10,450.5 million on June 30, 2020. As for the net profit, it more than doubled, amounting to CFAF 1,144.2 million at the end of June 2020 against CFAF 502.6 million in the same period of the last year. This improvement would be the result of a well-stocked order book, the burying project for the high-voltage network in the city of Abidjan, as well as the exponential increase in operating income. These performances could have been more significant in the absence of the health crisis which weakened export sales. SICABLE share price changed timidly at the start of 2020 and stood at CFAF 520 on March 12, a decrease of 17.5% compared to the start of the year. The following day, the trend was reversed with the decision of the directors to distribute a net amount of dividends similar to that of the previous year ( CFAF 75) despite a drop in the company's net profit at the end of 2019. Thus, the share price on the stock market rose to CFAF 730 (+ 15.9% compared to the start of the year) at the close of the August 21, 2020 session. The excellent performance achieved by SICABLE at the end of the first half of the 2020 quarter could help keep the share price on this good trajectory for the rest of the year.

### Market News

□ [MALI]: Following the military coup in Mali, the Economic Community of West African States (ECOWAS) has initiated discussions with the putshists in order to restore constitutional order.
